

Quenching Tanzania

Ensuring functional water wells for all

Water is **life**. Yet, for many in Tanzania, access to clean and functional water wells remains a daily struggle.

Tanzania's Water Crisis

40 billion

In Sub-Saharan Africa, women and girls spend an estimated 40 billion hours a year collecting water.

16 million

Out of its population of 59 million people, 16 million people (28%) lack access to safe water.

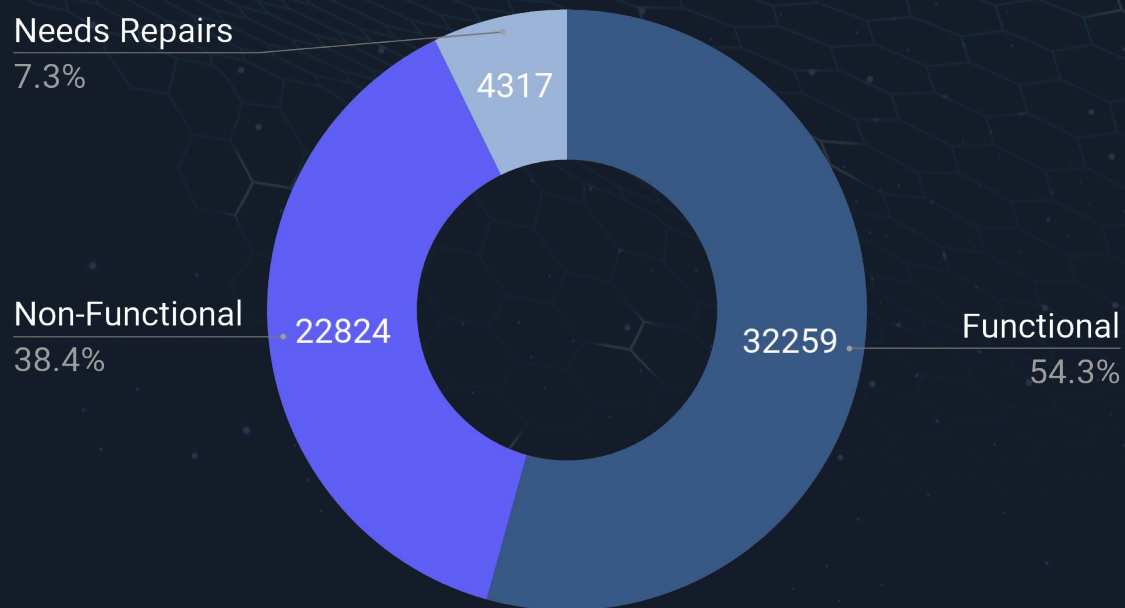

Objective

Bring you a model that predicts **well functionality** with utmost accuracy.

Data:

60,000 records of water wells in Tanzania

Model Comparison

Recommendations

	Overall Accuracy	Functional Accuracy	Dysfunctional Accuracy	Identifies "Needs Repair"
TriWell Predictor	77.8%	89%	64.7%	Yes
AquaClassify Pro	79.4%	85%	71.3%	No

Next Steps:

- Dive deeper into data to find more specific correlations.
- Use more advanced predictive modeling techniques to further maximize accuracy.

Thank You!
